

Getting Started

start project

1. 运行项目:

run command: `mvn spring-boot:run`

2. 打包项目:

clean and package project:

`mvn package clean -Dmaven.test.skip=true`

repackage project:

`mvn package -Dmaven.test.skip=true`

命令行一键发送请求:

```
curl -H "Content-Type:application/json" -H "Data_Type:msg" -X POST --data "$(cat test_data1.json)"
http://localhost:80/api/binpicking
```

测试数据位于 /tms-bin-packing/src/main/resources/native/test_data 之中

centos 安装 maven:

1. `wget http://repos.fedorapeople.org/repos/dchen/apache-maven/epel-apache-maven.repo -O /etc/yum.repos.d/epel-apache-maven.repo`
2. `yum -y install apache-maven`

出现关于动态链接库相关错误时

1. `install-extral-libraries.sh` 脚本:安装缺失依赖
2. `compile-library.sh` 脚本:重新编译c程序
